

Selecting Frames & Locating Your Pump

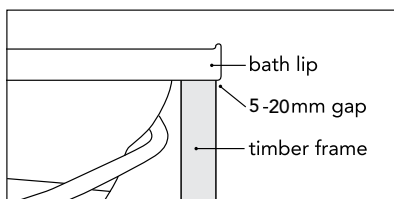

Your choice of frame and pump location are required at the time of ordering, as Stylus make the spa bath to your pump and frame specification. Please use our pump location and frame guide to establish which configuration will best suit your bathroom. Ask your plumber/builder for guidance if in doubt. Specific pump positions for each spa bath model are listed in Stylus' resource guide - ask your retailer for assistance.

Spa Bath Frame

All Stylus spa baths include timber support frames which are designed to make installing your spa bath easy and effortless. Two timber support frame options are available. Usually, no further floor reinforcement is necessary.

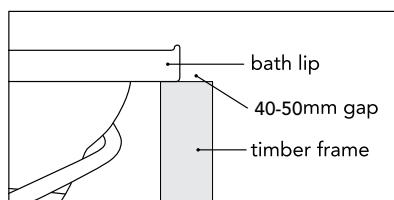

1. Underlip

The frame sits under the lip of the spa bath thus enabling the spa bath to be installed with the minimum footprint. The underlip frame enables the front faces of the spa bath to be tiled/paneled flush against the lip. Please see individual spas for achievable gap.

2. Infront of Lip

The frame sits in front of the lip of the spa bath thus enabling the spa bath to be installed with a ledge on the front faces of the spa bath.

Pumps - The pump must be installed in an accessible location.

1. Free Standing Pump

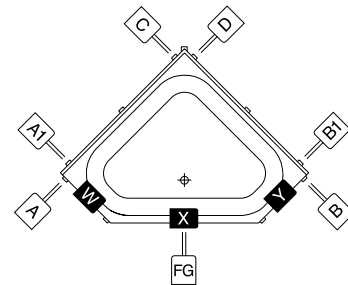

This option allows your plumber to place the pump (which is supplied separately) up to 3 metres away from the pump position specified at time of order.

2. Pump Mounted

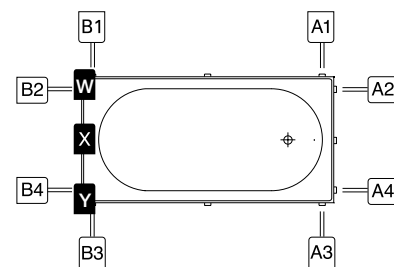

This frame option allows for quick and cost effective installation of the spa bath. With this option, the spa bath is plumbed, water tested and piped at Stylus' factory which allows your plumber to install the spa bath without any additional on-site plumbing work other than attaching the plug and waste.

WARNING: The shape of the spa bath and option of Infront or Underlip frame will limit the position of the pump. Please refer to the Stylus Resource Guide for details on each model.

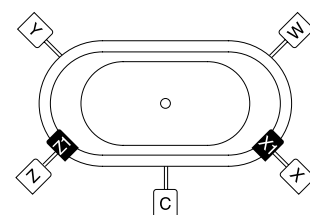

- - Indicates pump is NOT mounted to the frame ie free standing or detached
- - Indicates pump is mounted to the frame
